ContractFlow User Story

Personas

1. Platform Administrator
2. Company Administrator
3. Assigned Project Workspace Admin
4. Assigned HSE Workspace Admin
5. Assigned Finance Workspace Admin
6. Client Project Manager
7. Client HSE Officer
8. Client Finance Rep
9. Contractor Project Lead
10. Contractor HSE Officer
11. Contractor Finance Rep

Common to Every Authenticated User

As an Authenticated User I want to,

1. Sign in and sign out using email and password, or 2FA if enabled on the account.
2. Reset a forgotten password via an emailed link
3. Enable or disable 2FA on my account
4. View and revoke my own active sessions on other devices (USER_SESSION), so I can sign myself out remotely if I lose a device.
5. Set up my profile on first login and edit it at any time.
6. Change my password at any point.
7. Navigate and search all contracts assigned to my account.
8. Receive a contract role invitation by email with the option to accept or reject.
9. Choose which events notify me by email or in-app, and view my notifications.

1. Platform Administrator

As a Platform Administrator I want to,

1. View and search all companies and contracts platform-wide, so I can monitor platform health and respond to support requests.
2. Verify a newly registered company (PENDING_VERIFICATION → ACTIVE).
3. Suspend a user or company in response to a policy violation or security incident.
4. Review ACTIVITY_LOG entries across any contract, independent of either party's own records.

5. View failed notification deliveries (NOTIFICATION.status = FAILED) platform-wide, so systemic delivery problems get caught before a user misses something time-critical.

Can view: everything, platform-wide.
Cannot do: author contract-level content — no milestones, invoices, or HSE records. Oversight only.

2. Company Administrator

Onboarding

As a Company Administrator I want to,

1. Create a company account and verify my email.
2. Log in and set up my company's profile.
3. Manage and update my company's profile (registration number, tax ID, currency, address) at any time.

Company Documents

As a Company Administrator I want to,

4. Upload and manage company-level documents (e.g. insurance master policy, incorporation certificate) visible across every contract, not tied to one.
5. Upload a new version of a company document while keeping prior versions on file (DOCUMENT_VERSION).

Contracts

As a Company Administrator I want to,

6. Create a contract, add workspaces during creation, and edit contract info or workspaces (add/remove) anytime.
7. Delete a contract, with a confirmation step required first.
8. Recover a deleted contract's full information via a single button.
9. Read-only navigation through every past and current contract to monitor progress.
10. Create a contract as a subcontract of an existing one (parent_contract_id).
11. Create and manage contract sites — name, address, coordinates — before any site log, inspection, or incident can reference one.
12. Record my company's signatory name, title, and signing date once a contract is executed (CONTRACT_PARTY.signatory_*, signed_at).

Company-to-Company & Team

As a Company Administrator I want to,

13. Send an invitation (by email) to another company to join a contract as the contractor or sub-contractor.
14. Accept or reject a contract invitation sent by another verified company.

15. Invite a new team member by email with a company role, so they can join a contract workspace without me sharing credentials.
16. Assign a team member to a specific contract with a specific workspace role (CONTRACT_ROLE_ASSIGNMENT).
17. Assign administrative (Workspace Admin) rights to a department lead for their workspace.
18. Revoke a contract role or workspace admin assignment when someone leaves, so access doesn't outlive the relationship.

Can view: company profile, every COMPANY_USER and role assignment at my company, outgoing invitation records, company-level documents.
Constraint: company admin rights don't grant workspace access to any specific contract — that still needs an explicit CONTRACT_ROLE_ASSIGNMENT.

3–5. Workspace Admins (Project / HSE / Finance)

Client PM or Contractor Project Lead for Project; either HSE Officer for HSE; either Finance Rep for Finance, plus:

As a Workspace Administrator I want to,

1. Assign or remove team members on my workspace for this contract.
2. View and act on everything the underlying Rep role can, for my own company's assignments.
3. Cannot remove myself as the sole admin of a workspace without first assigning a replacement, so a workspace is never left without one.

6. Client Project Manager

Contract Overview

As a Client Project Manager I want to,

1. See current stage, milestone progress, and a one-glance summary: progress, original vs. current value, certified/paid amounts, key dates.
2. Move the contract to the next stage with a mandatory reason, recorded in CONTRACT_STATUS_HISTORY.

3. Place a contract on hold, resume, or terminate it with a mandatory reason.
4. See planned vs. actual dates per stage/milestone, to spot schedule slippage early.
5. Filter status history by date, status, and user.

Milestones

As a Client Project Manager I want to,

1. See a queue of milestones awaiting my decision, sorted by submission/due date.
2. Review completion evidence (photos, inspection reports, certificates) before deciding.
3. Approve, reject (with mandatory reason), or approve at partial progress stating what remains.
4. See a resubmitted milestone's full history, including the earlier rejection.
5. See which approved milestones have/haven't been invoiced yet.

Variations

As a Client Project Manager I want to,

1. See a variation's cost impact, time impact, description, and evidence in one view.
2. See how approval would change current_value_minor and the completion date before deciding.
3. Approve, reject, or request more information without deciding yet.
4. See every variation with status and cumulative cost/time effect, to monitor scope creep.
5. Require a second approver above a cost threshold.

Read-Only Visibility

As a Client Project Manager I want to,

1. Contractor's daily logs by contract and date; flag days with no log.
2. Open incidents, corrective actions, and compliance status (read-only).
3. Inventory stock and material cost.
4. Invoices and payments (read-only — no Finance actions).

Communication

1. A Project workspace channel shared with the Contractor PM, for queries tied to a milestone, variation, or log.
2. Direct messages to my own company's assigned team members.

3. Comment on a contract/milestone with chosen visibility (all parties or my company only); reply to and resolve threads.

Dashboard, Search & Audit

1. Dashboard of items awaiting decision, overdue milestones, missing logs, at-risk contracts.
2. Portfolio view across all assigned contracts.
3. Filter/search milestones, variations, logs, comments; export to CSV/PDF.
4. Audit trail of who approved/rejected/changed what, with timestamps.

Can view: full contract detail, stages/milestones/variations, invoices (certify, not issue), compliance records, HSE summaries, contractor site logs, contract activity log. **Cannot do:** issue an invoice — that's the Awarded party's action.

7. Client HSE Officer

Inspections

As a Client HSE Officer I want to,

1. Schedule a planned inspection (date, scope, checklist) or run an unannounced one.
2. Complete a standard checklist (pass/fail/N-A per item); attach photos/documents to findings.
3. Record an overall outcome (satisfactory / needs improvement / unsatisfactory).
4. See inspection history on a contract, comparing findings over time.

Corrective Actions

As a Client Project Manager I want to,

1. Link a finding directly to a corrective action when recording it.
2. Set priority and due date based on risk level; track every action I've raised.
3. Review closure evidence and verify or reject closure with a reason.
4. Approve or decline a deadline extension request with a reason.
5. Be alerted on overdue actions; escalate persistent or repeatedly-rejected ones.

Incidents

As a Client Project Manager I want to,

1. Be notified immediately when the contractor reports an incident, especially serious/notifiable ones.
2. Review investigation findings and root cause; request more information.
3. Confirm whether a notifiable incident was reported to the authority, and when.
4. Accept or return an investigation with a reason before closure.
5. Raise a corrective action directly from an incident.

Compliance & Stop-Work

As a Client Project Manager I want to,

1. See every compliance requirement and its status.
2. Reject a compliance record with a mandatory reason; view its prior versions.
3. Be alerted as a verified record approaches and reaches expiry.
4. Raise a stop-work flag on a contract or site for a critical issue, pausing work until resolved.
5. Acknowledge when a stop-work flag is lifted, so the record shows who cleared it to resume.

Communication, Dashboard & Reporting

As a Client Project Manager I want a/an,

1. An HSE workspace channel with the Contractor's HSE rep; direct messages to my own team.
2. Thread messages to a specific inspection, finding, action, incident, or compliance record.
3. Dashboard of incidents awaiting review, overdue actions, pending verifications, upcoming inspections.
4. Compare safety performance across contractors; filter/search/export; audit trail of decisions.

Can view: incidents, inspections, corrective actions, compliance records on assigned contracts.
Key constraint: HSE_INCIDENT_PERSON.injury_description is flagged sensitive/encrypted — needs tighter access than ordinary HSE records, even for HSE staff.

8. Client Finance Rep

Invoice Review

As a Client Finance Rep I want to,

1. Queue of submitted invoices, sorted by submission/due date.
2. Certify (SUBMITTED → CERTIFIED) or reject with a mandatory reason.
3. Compare line items against the approved milestone/completed work claimed.
4. View supporting documents attached; see full history of a resubmitted invoice.
5. Warning if an invoice would push cumulative billed past current_value_minor.

Adjustments & Retention

As a Client Finance Rep I want to,

1. Apply/confirm retention, advance recovery, and tax adjustments.
2. Retention calculated automatically from retention_rate_bps.
3. Track outstanding retention and when it's due for release.

Payments

As a Client Finance Rep I want to,

1. See certified invoices ready for payment.
2. Record a payment (date, amount, method, reference).
3. See whether the contractor confirmed receipt; follow up on unconfirmed ones.
4. See and respond to a payment dispute (short-payment, non-receipt).
5. Approve a recorded payment before it's final.

Financial Position

As a Client Finance Rep I want to,

1. Original vs. current contract value; every approved variation's effect on it.
2. Contract financial summary: original/current value, certified, paid, retention held.
3. FX details on cross-currency payments.

Communication, Dashboard & Reporting

As a Client Finance Rep I want to,

1. A Finance workspace channel with the Contractor's Finance rep; direct messages to my own team.
2. Thread messages to a specific invoice or payment.
3. Dashboard: invoices awaiting certification, payments awaiting approval, overdue amounts.
4. Filter/search/export invoices, payments, retention, FX data; audit trail.

Can view: every invoice billed to my company, every payment against them, milestone payment amounts.
Cannot do: issue an invoice or submit a site daily log — contractor-side actions.

9. Contractor Project Lead

Daily Logs

As a Contractor Project Lead I want to,

1. Save a log as a draft during the day, submit at end of day.
2. Attach photos/documents; record delays and causes.
3. Copy forward labour/equipment from the previous day.
4. See a calendar of submitted logs; flag days with no log.
5. Submit a correction to an already-submitted log, original kept on file.

Milestones

As a Contractor Project Lead I want to,

1. See all milestones with status, due date, percentage complete.
2. Attach completion evidence when submitting.
3. See rejection reasons; resubmit a corrected version linked to the original.
4. Be alerted as a milestone approaches/passes its due date.
5. See approved-but-not-yet-invoiced milestones and notify my Finance Rep.

Variations

As a Contractor Project Lead I want to,

1. State cost and time impact with a description; attach supporting evidence.
2. Track status and running effect on contract value/completion date.

3. Withdraw a submitted variation before the client acts on it.
4. See an approved variation automatically reflected in current contract value.

Inventory

As a Contractor Project Lead I want to,

1. See current stock per item per contract.
2. Record transactions (quantity, date, unit cost, reference).
3. Set a reorder level and be alerted below it.
4. Record adjustments (damaged/lost/returned) with a reason.
5. See inventory cost against the contract.

Safety Visibility & Documents

As a Contractor Project Lead I want to,

1. See incidents and open corrective actions on my contract.
2. Link a daily log entry to an incident or corrective action.
3. Upload relevant documents, and a new version of one already on file.

Communication, Dashboard & Reporting

As a Contractor Project Lead I want to,

1. A Project workspace channel with the Client PM; direct messages to my own team.
2. Thread messages to a specific milestone, variation, or log.
3. Dashboard: overdue milestones, variations awaiting decision, missing logs, low-stock items.
4. Filter/search/export logs, milestones, variations, inventory.

Can view: all contracts assigned to my account, my company's assignments, stages/milestones, own invoices and payments received, documents shared as all-parties.
Key constraint: cannot approve my own milestone or certify my own invoice — approval authority sits structurally with the Awarding party.

10. Contractor HSE Officer

Incidents

As a Contractor HSE Officer I want to,

1. Classify by type and severity; record date, time, location, site.
2. Attach photos, witness statements, evidence.
3. Update with investigation findings and root cause as they emerge.
4. See current status of every incident I've reported.
5. Be reminded when a notifiable incident still hasn't been reported to the authority.
6. Link an incident to the contract, work package, or milestone it affects.

Corrective Actions

As a Contractor HSE Officer I want to,

1. See every action assigned to my team, with owner, due date, status.
2. Attach evidence when closing; be alerted as actions approach/pass due date.
3. Request an extension with a reason.
4. See when the client reopens or rejects a completed action, with their reason.

Compliance

As a Contractor HSE Officer I want to,

1. See every requirement and whether it's met, expiring, or missing.
2. Be notified before expiry (e.g. 60/30/7 days out).
3. Upload a renewal that replaces an expiring record while keeping the prior version.
4. See whether the client accepted/rejected a submission, and why.
5. See my company's overall compliance status across all assigned contracts.

Communication, Dashboard & Reporting

As a Contractor HSE Officer I want to,

1. An HSE workspace channel with the Client's HSE rep; direct messages to my own team.
2. Thread messages to a specific incident, action, or compliance record.
3. Dashboard: open incidents, overdue actions, expiring compliance.

4. Safety metrics (incident counts, severity, days since last lost-time incident); filter/search/export.

Can view: incidents, inspections, corrective actions on contracts my company is party to; my own submitted compliance records and their verification status.
Cannot do: self-verify my own submitted compliance record — verification runs through the Awarding party's HSE rep.

11. Contractor Finance Rep

Invoicing

As a Contractor Finance Rep I want to,

1. Save an invoice as a draft before submitting.
2. Attach supporting documents (completion certs, timesheets, delivery notes).
3. See current status of every invoice at every stage.
4. Be blocked from invoicing against incomplete work or unapproved milestones.
5. Be warned if an invoice would exceed contract value.
6. See a resubmitted invoice linked to the original rejection, with full history.

Payments

As a Contractor Finance Rep I want to,

1. See payment date, amount, method, reference per payment.
2. Confirm receipt of a payment.
3. Flag a payment as short-paid or not received.
4. Download a payment receipt/remittance summary.

Retention & Adjustments

As a Contractor Finance Rep I want to,

1. Track retention and advance recovery deducted per invoice.
2. See when held retention becomes due for release.
3. See cumulative amount paid vs. net payable, to forecast cash flow.

Communication, Dashboard & Reporting

As a Contractor Finance Rep I want to,

1. A Finance workspace channel with the Client's Finance rep; direct messages to my own team.
2. Thread messages to a specific invoice or dispute.
3. Dashboard: outstanding, overdue, and paid amounts across assigned contracts.
4. Filter/search/export invoice, payment, retention data.

Can view: my own company's issued invoices and payments against them, retention/adjustment history.
Cannot do: certify my own invoice or approve my own payment — both require Awarding-side action.
